

**The scrubbing machine
that makes cleaning easier**

Available in three versions you can customize to optimize the cleaning intervention

Antea is a walk behind scrubbing machine offering high performances for both maintenance and heavy duty cleaning of floors up to 2200 sq.m.

It is available with a disc brush with 50 cm working width, cable (E) or battery powered, with traction (BT) or without it (B). Moreover, they come with traction also the scrubbing-sweeping version with 2 cylindrical brushes (BTS) and the new orbital version (BTO).

Antea stands out for its new design that provides reliability and sturdiness. Such qualities are granted also by innovative choices, like the use of a pressure die-cast aluminum squeegee mount, machine frame and brush head. The operator will find the machine very easy to use and to manoeuvre. Its compact size makes it an ideal model for several sectors: healthcare, hospitality, large-scale retailing, automotive and public institutes.

PLUS

Many are the benefits Antea can offer:

- Intuitive drive, with few and easy controls
- Versatility, thanks to the compact size it is ideal to meet the cleaning needs of several sectors
- Full accessibility to components for easier maintenance
- Energy saving and silent operation < 66 dB (A), thanks to Eco device (traction versions)
- Control of water and detergent consumption with CDS system (optional, only traction versions)
- Reliability over time and sturdiness are guaranteed by the new design and the new pressure die-cast aluminum frame
- Easy Clean: special treatment that prevents dirt from sticking on the surface, making easier tank cleaning and sanitizing (upon request).

Antea 50 E/B/BT

Antea 50 BTS

Antea 50 BTO Orbital

The scrubbing-sweeping version is equipped with two cylindrical brushes that enable to pick up small debris and convey them in a dirt hopper

Thanks to the high frequency oscillations, Antea 50 BTO Orbital allows you to get outstanding cleaning results saving energy, water and detergent.

Designed to help even unskilled operators

1. All functions at a glance

The simple control panel of Antea 50 E/B favours an intuitive use.

The traction versions feature more functions such as the **Eco device** to reduce consumption and the **knob** for speed adjustment.

Eco device

Only one button to reduce energy consumption and noise level.

It is an ideal working setting for maintenance cleaning and to use the machine in sensitive or frequented environments.

Reduces noise levels

Reduces energy consumption

Control panel of E version

Control panel of B version

Power button light

Control panel of traction versions

2. How to start. Solutions to properly dose the detergent

Without CDS

Antea solution tank has a measuring cap that helps to add always the proper detergent amount

With CDS

Separate water and detergent management

3 litres detergent tank

Traction versions can be equipped upon request with CDS (Comac Dosing System) for the separate management of water and detergent, that allows to increase or reduce their flow, according to the type of dirt to clean, thus avoiding wastes. It reduces cleaning solution consumption by up to 50%.

Robust and reliable design, built to last

2. How to start. Solutions to properly dose the detergent

The hose for the solution tank filling can be connected directly to any water tap, giving the possibility to supply the machine everywhere.

The tank level is always under control, thanks to an indicator that results useful when filling the tank with water and during work, to know when you need to stop to empty the recovery tank.

The recovery tank lid can hold small objects

3. Use: details that guarantee reliability over time

The chain to lower the squeegee is robust, made of steel, and equipped with an ergonomic handle, made out of die-cast aluminum.

The brush head is lowered/lifted through a comfortable pedal

The frame, the squeegee mount and the brush head are made out of die-cast aluminum, that makes them robust and shock proof

The brush can be easily adjusted without any tools to clean any type of floor

Antea 50 BT can be arranged with the equipment needed for fleet management through Comac Fleet Care (CFC). Such system allows the remote control of machines status: if, when and where each machine is operating or if maintenance is needed, to let you promptly intervene avoiding machine downtimes and unexpected costs for emergency maintenance.

SAFETY
The emergency button allows to immediately stop the machine in case of emergency (traction versions)

The on board battery charger makes recharging easier and quicker

The 4 wheels increase stability and manoeuvrability. Moreover, they make brush maintenance easier and allow to store the machine with the brush head up, to keep the brush in perfect conditions.

Proper daily maintenance keeps cleaning performances constant over time

Yellow color-code identifies the parts involved in daily maintenance. At the end of the shift the operator can easily and quickly find what parts have to be sanitized, without wasting time.

4. Daily maintenance: handy and fast

To ensure a perfect drying, the suction hose and the squeegee rubber blades must be cleaned at the end of any cleaning operation. The squeegee can be lifted to quickly clean the rubber blades.

For an effective vacuuming the suction filter must be kept clean

Solution filter cleaning

Rubber blades replacement or rotation are carried out in few seconds without any tools

The large diameter of the drain hose allows to quickly empty the recovery tank

Full access to components makes easier both regular and extraordinary maintenance.

The scrubbing-sweeping version (Antea 50 BTS) is equipped with a debris hopper that can be easily emptied taking it out from the right side

Optional accessories

A simple device allows the quick filling of the tank with clean water without the presence of the operator

Antea is available on request with an elastic net that can hold additional cleaning products that allows to complete the cleaning operations.

It is also possible to equip Antea with a hook to hold the brush, the squeegee or the tank lid, useful for machine store or maintenance. The tool-holder hook and the object-holder net can be both installed together
